

Cartesian Vectors (2-D)

Cartesian (rectangular) components of forces:

F_x and F_y are called the rectangular or Cartesian components of \vec{F} .

Let's introduce the unit vectors \vec{i} in the x-direction and \vec{j} in the y-direction. \Rightarrow

$$\begin{aligned}\vec{F} &= \vec{F}_x + \vec{F}_y \\ &= F_x \vec{i} + F_y \vec{j}\end{aligned}$$

\vec{F}_x and \vec{F}_y are the **vector** components of \vec{F} , while F_x and F_y are the **scalar** components of \vec{F} .

$$F_x = F \cos \theta$$

$$F_y = F \sin \theta$$

$$\tan \theta = \frac{F_y}{F_x}$$

Note θ
between F and X.

How to add forces :

$$\begin{aligned}\vec{R} &= \vec{F}_1 + \vec{F}_2 + \vec{F}_3 + \dots + \vec{F}_n \\ &= \sum_{i=1}^n \vec{F}_i\end{aligned}$$

Thus,

$$\begin{aligned}\vec{R} &= (F_{1x}\vec{i} + F_{1y}\vec{j}) + \dots + (F_{nx}\vec{i} + F_{ny}\vec{j}) \\ &= (F_{1x} + F_{2x} + \dots + F_{nx})\vec{i} + (F_{1y} + F_{2y} + \dots + F_{ny})\vec{j}\end{aligned}$$

Follow the following steps :

- ① Calculate the x and y components of **each** force.
- ② Add the x and y components of **all** the forces.

$$\begin{aligned}\vec{R} &= (\sum F_x)\vec{i} + (\sum F_y)\vec{j} \\ &= R_x\vec{i} + R_y\vec{j}\end{aligned}$$

- ③ Compute R :

$$R = \sqrt{R_x^2 + R_y^2}$$

$$\tan \theta_R = \frac{R_y}{R_x}$$

Cartesian Vector in 3-D

3. Determining components of a vector parallel and normal to a given direction. (Example 2.1)

$$\vec{F} = \vec{F}_x + \vec{F}_y + \vec{F}_z$$

$$= F_x \vec{i} + F_y \vec{j} + F_z \vec{k}$$

$$= F \cos \theta_x \vec{i} + F \cos \theta_y \vec{j} + F \cos \theta_z \vec{k}$$

$$= F (\cos \theta_x \vec{i} + \cos \theta_y \vec{j} + \cos \theta_z \vec{k})$$

$$|\vec{F}| = F$$

$$= \sqrt{F_x^2 + F_y^2 + F_z^2}$$

$$F^2 = (F \cos \theta_x)^2 + (F \cos \theta_y)^2 + (F \cos \theta_z)^2$$

$$F^2 = F^2 (\cos^2 \theta_x + \cos^2 \theta_y + \cos^2 \theta_z)$$

$$\Rightarrow \cos^2 \theta_x + \cos^2 \theta_y + \cos^2 \theta_z = 1$$

Recall:

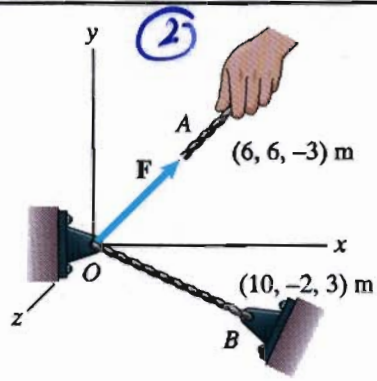

$$\vec{F} = F \vec{u}$$

\vec{u} is the unit vector along \vec{F}

$$\vec{u} = \cos \theta_x \vec{i} + \cos \theta_y \vec{j} + \cos \theta_z \vec{k}$$

Do NOT forget !!

$$\vec{R} = \sum \vec{F}_i$$

$$F_y = F \cos \theta_y$$

$$F_h = F \sin \theta_y$$

$$F_x = F_h \cos \phi$$

$$= F \sin \theta_y \cos \phi$$

$$F_z = F_h \sin \phi$$

$$= F \sin \theta_y \sin \phi$$
