

Each student who is registered in the science program of the chemical engineering has to perform an eight weeks in industry to practice his major. During the training, he has to submit three progress reports in weeks 3, 6 and 8. In the beginning of the semester, the student has to submit a report and discuss it with the advisor who will be assigned to him by the summer training advisor within one month after the semester start.

Note:

I strongly recommend that each student look for a place for himself to perform the training.
