

**Characterization of polycyclohexene by high field carbon-13 NMR spectroscopy.**

Wazeer, Mohammed I. M.; Tsonis, Christos P. Dep. Chem., Univ. Pet. Miner., Dhahran, Saudi Arabia. Polymer Bulletin (Berlin, Germany) (1984), 12(5), 475-9.

**Abstract**

The  $^{13}\text{C}$  NMR spectrum of polycyclohexene was recorded at 50.5 MHz and interpreted in terms of its different stereoisomers. The ratio of the threo to erythro forms was 2:1, and the spectrum was also sensitive to the tacticity.
