

COE 205, Term 082

Computer Organization & Assembly Programming

Programming Assignment# 1

Due date: Monday, April 13, 2009

- Q.1.** Write an assembly program that does the following:
- (i) Ask the user to enter matrix dimension N and read it.
 - (ii) Ask the user to enter an NxN matrix of integers. Assume that integers will be stored as double word numbers.
 - (iii) Print the entered matrix.
 - (iv) Compute the double of the matrix and print it.

A sample execution of the program is shown below:

Enter matrix dimension: 2

Enter a matrix of integers:

1

2

3

4

Your entered matrix is:

1 2

3 4

Matrix after Doubling:

2 4

6 8

The solution should be well organized and your program should be well documented. Submit a soft copy of your solution in a zip file. Your solution should be submitted in a word file that contains the following items:

- i) Your name and ID*
- ii) Assignment number*
- iii) Problem statement*
- iv) Your solution along with the code*
- v) Discussion of what worked and what did not work in your program. Include snapshots that demonstrate the working parts of your program. If things did not work and you attempted to solve them, mention that and write about the difficulty that you have faced.*

The soft copy should also contain both source code file (i.e. .asm) and the executable file (i.e. .exe).
