

## ICS 233, Term 081

## Computer Architecture &amp; Assembly Language

## Quiz# 5

Date: Saturday, Dec. 27, 2008

**Q.1.** What is the decimal value of the following single-precision floating-point number?

0100 0010 1100 0111 1000 0000 0000 0000

$$\begin{aligned}
 &= + (1.10001111000\dots0)_2 * 2^{(133-127)} = + (1.10001111000\dots0)_2 * 2^6 \\
 &= + (1100011.11000\dots0)_2 \\
 &= + 99.75
 \end{aligned}$$

**Q.2.** Show the single precision binary representation for: **-1000.5**.

$$1000.5 = (1111101000.1)_2 = (1.1111010001)_2 * 2^9$$

$$\text{Exp.} = 9 + 127 = 136$$

Single precision binary representation:

1100 0100 0111 1010 0010 0000 0000 0000

**Q.3.** Perform the following floating-point operation rounding the result to the **nearest even**. Perform the operation using **guard, round** and **sticky** bits.

0100 0000 0111 1111 1111 1111 1111 1111  
 + 0011 1101 0000 0000 0000 0000 0000 0001

We add three bits for each operand representing G, R, S bits as follows.

$$\begin{array}{r}
 \begin{array}{r}
 1.111\ 1111\ 1111\ 1111\ 1111\ 1111\ 000\ \times\ 2^1 \\
 +\ 1.000\ 0000\ 0000\ 0000\ 0000\ 0001\ 000\ \times\ 2^{-5} \\
 \hline
 1.111\ 1111\ 1111\ 1111\ 1111\ 1111\ 000\ \times\ 2^1 \\
 +\ 0.000\ 0010\ 0000\ 0000\ 0000\ 0000\ 001\ \times\ 2^1\ \text{(align)} \\
 \hline
 10.000\ 0001\ 1111\ 1111\ 1111\ 1111\ 001\ \times\ 2^1
 \end{array} \\
 \\
 = +\ 1.000\ 0000\ 1111\ 1111\ 1111\ 1111\ 101\ \times\ 2^2\ \text{(normalize)} \\
 = +\ 1.000\ 0001\ 0000\ 0000\ 0000\ 0000\ \quad \times\ 2^2\ \text{(round)}
 \end{array}$$
