## Karnaugh Map (K-Map)

---

- A tabular method to simplify function expressions – an alternative to algebraic manipulation
- Produces 2-level (sum of products or product of sums) implementation

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

2

## 1-variable K-map

- Consider the function  $F(X)$

$$F(X) = 0 \quad \begin{array}{c} x \\ \text{(F is NOT dependent on X)} \end{array} \begin{array}{cc} 0 & 1 \\ \boxed{0} & \boxed{0} \end{array}$$

$$F(X) = 1 \quad \begin{array}{c} x \\ \text{(F is NOT dependent on X)} \end{array} \begin{array}{cc} 0 & 1 \\ \boxed{1} & \boxed{1} \end{array}$$

$$F(X) = X \quad \begin{array}{c} x \end{array} \begin{array}{cc} 0 & 1 \\ \boxed{0} & \boxed{1} \end{array}$$

$$F(X) = X' \quad \begin{array}{c} x \end{array} \begin{array}{cc} 0 & 1 \\ \boxed{1} & \boxed{0} \end{array}$$

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

3

## 2-variable K-map

- Consider the function  $F(X,Y)$
- The general 2-variable K-map is as shown
- The map is formed by putting two 1-variable K-maps side by side

|       |                   |                  |     |
|-------|-------------------|------------------|-----|
|       |                   | $Y=1$            |     |
|       |                   | $Y$              | $Y$ |
| $X$   | $0$               | $1$              |     |
|       | $0$               | $1$              |     |
|       | $X'Y'$<br>$(m_0)$ | $X'Y$<br>$(m_1)$ |     |
| $X=1$ | $1$               | $1$              |     |
|       | $XY'$<br>$(m_2)$  | $XY$<br>$(m_3)$  |     |

- Examples:

|     |     |     |     |
|-----|-----|-----|-----|
|     |     | $Y$ |     |
|     |     | $Y$ | $Y$ |
| $X$ | $0$ | $1$ |     |
|     | $0$ | $1$ |     |
|     | $0$ | $0$ |     |
| $1$ | $0$ | $1$ |     |

$$F(X,Y) = XY$$

7/2/2005

|     |     |     |     |
|-----|-----|-----|-----|
|     |     | $Y$ |     |
|     |     | $Y$ | $Y$ |
| $X$ | $0$ | $1$ |     |
|     | $0$ | $1$ |     |
|     | $0$ | $1$ |     |
| $1$ | $1$ | $1$ |     |

$$F(X,Y) = X'Y + XY' + XY = X + Y$$

4

## 2-variable K-map - cont'd

- Neighbors sharing one literal:
  - $X'Y'$  (or  $m_0$ ) and  $X'Y$  (or  $m_1$ )  $\rightarrow$  sharing the literal  $X'$
  - $X'Y'$  (or  $m_0$ ) and  $XY'$  (or  $m_2$ )  $\rightarrow$  sharing the literal  $Y'$
  - $X'Y$  (or  $m_1$ ) and  $XY$  (or  $m_3$ )  $\rightarrow$  sharing the literal  $Y$
  - $XY'$  (or  $m_2$ ) and  $XY$  (or  $m_3$ )  $\rightarrow$  sharing the literal  $X$

- If for example

$$F(X,Y) = m_0 + m_1 = X'Y' + X'Y$$

Then once can simplify F as follows:

$$F(X,Y) = X'(Y' + Y)$$

$$= X' \rightarrow \text{the shared literal}$$

|   |   |   |   |
|---|---|---|---|
|   | Y | 0 | 1 |
| X | 0 | 1 | 1 |
|   | 1 | 0 | 0 |

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

5

## 2-variable K-map - cont'd

- Example2:  $F(X,Y) = \Sigma m(1,2,3)$

F can be simplified as in

$$\begin{aligned} F &= X'Y + XY' + XY \\ &= X'Y + XY + XY' + XY \\ &= (X' + X)Y + X(Y' + Y) \\ &= Y + X \end{aligned}$$

X - the common literal for this neighboring group

Y - the common literal for this neighboring group

7/2/2005

Dr. Ashraf S. Has

## 2-variable K-map – All Possible Squares

- 4 Groups each of one minterm
- 4 groups each of two minterms
- 1 group of 4 minterms

7/2/2005

Dr. Ashraf S. Has

## 3-variable K-map

- Consider the function  $F(X,Y,Z)$
- The general 3-variable K-map is as shown
- The map is formed by putting two 2-variable K-maps side by side
- Note:
  - The minterms are ordered such that any two neighboring minterm differ only in one literal

- The K-Map (the numbering of the minterms) assumes X is the most significant variable and Z is the least significant variable

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

8

## 3-variable K-map – cont'd

- Example  $F(X,Y,Z) = m_5 + m_7$

Once can simplify as in

$$\begin{aligned} F &= m_5 + m_7 \\ &= XY'Z + XYZ \\ &= XZ(Y' + Y) \\ &= XZ \end{aligned}$$

Or once can use the K-map as shown

The common literals for this group is  $XZ$  (they differ in  $Y$ )

Therefore:  $F(X,Y) = XZ$

|   |         |     |    |              |  |
|---|---------|-----|----|--------------|--|
|   |         | YZ  |    |              |  |
|   |         | 00  | 01 | Y=1<br>11 10 |  |
| X | 0       |     |    |              |  |
|   | X=1 [ 1 |     | 1  | 1            |  |
|   |         | Z=1 |    |              |  |

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

9

## 3-variable K-map – cont'd

- Example  $F(X,Y,Z) = \Sigma m(2,3,4,5)$

Once can simplify as in

$$\begin{aligned} F &= m_2 + m_3 + m_4 + m_5 \\ &= X'YZ' + X'YZ + XY'Z' + XY'Z \\ &= X'Y(Z' + Y) + XY'(Z' + Z) \\ &= X'Y + XY' \end{aligned}$$

Or one can use the K-map as shown

The common literals for the 1<sup>st</sup> group is  $X'Y$  (they differ in  $Z$ ), while the common literals for the 2<sup>nd</sup> group is  $XY'$  (they differ in  $Z$ )

Therefore:  $F(X,Y) = X'Y + XY'$

|   |         |     |    |              |   |
|---|---------|-----|----|--------------|---|
|   |         | YZ  |    |              |   |
|   |         | 00  | 01 | Y=1<br>11 10 |   |
| X | 0       |     |    | 1            | 1 |
|   | X=1 [ 1 | 1   | 1  |              |   |
|   |         | Z=1 |    |              |   |

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

10

## 3-variable K-map - cont'd

- Example  $F(X,Y,Z) = \Sigma m(0,2,4,5,6)$

Once can simplify as in

$$\begin{aligned}
 F &= m_0 + m_2 + m_4 + m_5 + m_6 \\
 &= X'Y'Z' + X'YZ' + XY'Z' + XY'Z + XYZ' \\
 &= X'Y'Z' + X'YZ' + XY'Z' + XY'Z + XY'Z \\
 &\quad + XYZ' \\
 &= Y'Z'(X' + X) + YZ'(X' + X) + \\
 &\quad XY'(Z' + Z) \\
 &= Z'(Y' + Y) + XY' \\
 &= Z' + XY'
 \end{aligned}$$

Or one can use the K-map as shown

The common literals for the 1<sup>st</sup> group is  $XY'$  (they differ in  $Z$ ), while the common literal for the 2<sup>nd</sup> group is  $Z'$  (they differ in  $XY$ )

Therefore:  $F(X,Y) = Z' + XY'$

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

11

## 3-variable K-map - All Possible Groups

- 8 groups each of 1 minterms
- 12 groups each of 2 minterms
- 4 groups each of 4 minterms
- 1 group of 8 minterms

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

12

## Rules for Choosing Groups

- The groups SHOULD cover all minterms
- The groups SHOULD have minimum overlap
- The groups SHOULD be maximized in size (to reduce their number or product terms)

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

13

## Example

- Consider  $F(X,Y,Z) = \Sigma m(1,3,4,5,6)$

Following the groups selection rules:

- there is no group of 8 or 4 that can be selected
- there are only groups of 2 that can be selected
- once can select the groups as shown (minimum no of groups)

Therefore  $F(X,Y,Z) = X'Z + Y'Z + XZ'$

OR (See second K-Map)

$F(X,Y,Z) = X'Z + XZ' + XY'$

The simplest expression is NOT unique!

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

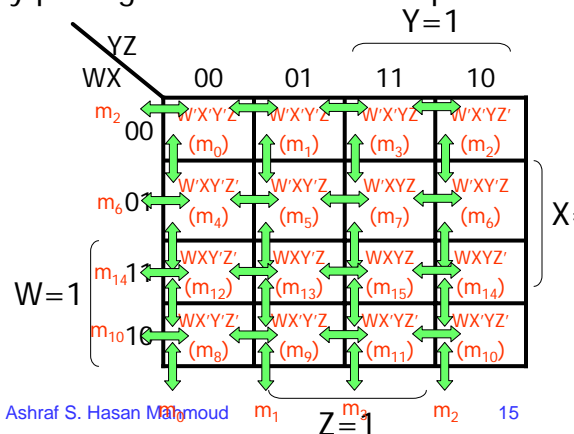

14

## 4-variable K-map

- Consider the function  $F(W,X,Y,Z)$
- The general 4-variable K-map is as shown
- The map is formed by putting two 3-variable K-maps on top of each other

- Note:

- The minterms are ordered such that any two neighboring minterm differ only in one literal
- The K-Map (the numbering of the minterms) assumes  $W$  is the most significant variable and  $Z$  is the least significant variable

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

m<sub>1</sub> m<sub>2</sub> 15

## 4-variable K-map - All Possible Groups

- 16 groups of one minterm
- 32 groups of two minterms
- ? groups of four minterms
- 8 groups of 8 minterms
- 1 group of 16 minterms

7/2/2005

Dr. Ashraf S. Hasan Mahmoud

16

## 4-variable K-map - Example

- Consider  $F(W,X,Y,Z) = \Sigma m(0,1,2,4,5,6,8,9,12,13,14)$

$$F(W,X,Y,Z) = Y' + W'Z' + XZ'$$
