Please confirm entries:

1. Is the paper Moderately relevant to the theme of the Workshop?
2. Is the Language of the paper satisfactory? Probably
3. Does the abstract adequately summarise the paper's content? Yes
4. Does the introduction clearly state the background to motivate the non-specialist? Probably
5. Is the paper technically sound? Only partially
6. Does the paper make a contribution to the state-of-the-art in its field? Only partially
7. Is the quality of figures appropriate? Yes
8. Apart from technical contents, how would you rate the quality of the presentation? Good

II. RECOMMENDATIONS

III. OVERALL 5 RATING

(On 1 - 10 scale)

IV. COMMENTS TO AUTHORS The title may be changed by removing Applications in two places, to read a Framework for Internet Applications Taxonomy for Developers (the word

appears 3 times in the title). (a) Several sentences where a word has appeared once. (b) First person (that is use of avoided). (c) The proposal deals a lot of log files and reporting, and less on how to be used intelligently (there are no AI techniques/tools used, or inference techniques employed). (d) Appendices are missing, they are the tables in the end, then there is no correspondence with the reference in the title, it is incorrect.

COMMENTS TO CONF. ADMIN The author refers to the lack of a unified standard, and then goes on to say how and reporting can help in defining what a superior or intelligent application is. The paper does not contribute much. A border can be added, say.
