

A Framework for Integration of Web-based Network Management and Management by Delegation

By the
Network Management Group (NMG)

Objectives of the Project:

1. Design and implement a new framework that improves on existing web-based network management systems.
2. Define and implement new types of web-based network management messages.
3. Design and develop a framework for integrating web-based network management with network management by delegation.
4. Design and implement a fault-tolerant network management system.
5. Investigate distributed, hierarchical, and redundant network management.
