---

**Problem 1.a)** Find the surface integral of  $\mathbf{F} = 5 \mathbf{a}_y$ , over  $S$ , where  $S$  is a cubical surface 3 units of length of the side with a corner at the origin. One of the faces of the cube lies in the first quadrant of the  $x$ - $y$  plane. **(b)** Repeat (a) for  $\mathbf{F} = x^2 y^2 \mathbf{a}_x$ .

**Problem 2.a)** Evaluate the surface integral of  $\mathbf{F} = \frac{\mathbf{a}_r}{r^2}$  over the spherical surface of radius 4 centered at the origin. **(b)** Repeat part (a) for  $\mathbf{F} = \frac{\sin^2 \phi}{r^2} \mathbf{a}_r + \cos \phi \mathbf{a}_\theta$ . **(c)** Repeat part (a) for  $\mathbf{F} = \mathbf{a}_x$ .

**Problem 3.** Consider the conical surface  $S$  shown in figure 2. The cone has height  $h$  and base radius  $a$ . Evaluate the closed surface integral of the following vector fields: **(a)**  $\mathbf{F} = r \mathbf{a}_r$ . **(b)**  $\mathbf{F} = r \mathbf{a}_\theta$ . **(c)**  $\mathbf{F} = \cos \phi \mathbf{a}_\phi + r \mathbf{a}_\theta$ .

**Problem 4.** Consider the closed cylindrical surface of height  $h$  and base radius  $a$  as shown in figure 3. Evaluate the closed surface integral of  $\mathbf{F}$  over this surface if: **(a)**  $\mathbf{F} = \rho^2 \mathbf{a}_\rho + \rho \sin \phi \mathbf{a}_\phi + \rho^2 \sin \phi \mathbf{a}_z$ . **(b)**  $\mathbf{F} = x \mathbf{a}_x + z \mathbf{a}_z$ .
