

# PROBLEMS AND SOLUTIONS

## AIMS AND SCOPE

*Problems and Solutions* is a mathematical book series that publishes works utilizing formal tools and methods of one or more branches of mathematics - ode, pde, global analysis, dynamical systems, lie groups, topology, geometry, analysis, operator theory, algebra, number theory, combinatorics, logic, probability, statistics, algorithms - to define and to classify problems derived by particular kinds of disadvantages - i.e. physical, psychical, economical, social disadvantages - in order to facilitate the successive development of possible solutions. To be published a work must be structured, correct, clear and well written. Mathematicians are encouraged to cooperate with other working scientists and with people and organizations interested to develop, to promote and to benefit the obtained results.
