Math 201, Calculus III
Calculus (Early Transcendentals): by James Stewart; $\boldsymbol{6}^{\text {th }}$ edition (2008)
Math 201 is a continuation of Math 101 (Calculus I), and Math 102 (Calculus II). These courses are designed as an introduction to the fundamental concepts of calculus and analytic geometry. The concepts studied in Math 201 include solid analytic geometry, vectors and surfaces, differentiation of functions of several variables and multiple integrals.

Class Work: $15 \%$. It is based on quizzes, homework, or other class activities determined by the instructor. All quizzes must be of written type and not of multiple choice type.

- KFUPM policy with respect to attendance (lectures and recitations) will be strictly enforced.
- The students are strongly urged to solve much more problems than the homework listed above.
