Physics 212 – Quiz #4  
Chapter 4Key

Id#:

- A ball of mass 20 g moves with a speed of 30 m/s. If its speed is measured to an accuracy of 0.1%, what is the minimum uncertainty in its position?

$$\hbar = 1.055 \times 10^{-34} \text{ J}\cdot\text{s}$$

$$\Delta p * \Delta x = \frac{\hbar}{2}$$

$$\Delta p = m \Delta v \Rightarrow m \Delta v * \Delta x = \frac{\hbar}{2}$$

$$\Rightarrow \Delta x = \frac{\hbar}{2m \Delta v}$$

$$\frac{\Delta v}{v} = 0.001 \Rightarrow \Delta v = 0.001 \times v = 0.03 \text{ m/s}$$

$$\Rightarrow \Delta x = \frac{1.055 \times 10^{-34}}{2 \times 20 \times 10^{-3} \times 3 \times 10^2} = \boxed{8.8 \times 10^{-32} \text{ m}}$$

Too small to be detected!

- An atom in an excited state 1.8 eV above the ground state remains in that excited state 2.0  $\mu$ s before moving to the ground state. What is the minimum uncertainty in its energy?

$$\Delta E * \Delta t = \frac{\hbar}{2}$$

$$\Delta E = \frac{\hbar}{2 \Delta t} = \frac{1.055 \times 10^{-34}}{2 \times 2 \times 10^{-6}} = 2.6 \times 10^{-29} \text{ J}$$

$$= \boxed{1.6 \times 10^{-10} \text{ eV}}$$
