# COE 202, Term 131 <br> Digital Logic Design 

## Quiz\# 4

Date: Tuesday, Nov. 25

Q1. Design a circuit that accepts two 2-bit unsigned numbers $A=A_{1} A_{0}$ and $B=B_{1} B_{0}$. The circuit produces $\mathrm{A}-\mathrm{B}$ when $\mathrm{A}>\mathrm{B}$, and produces $\mathrm{A}+\mathrm{B}$ otherwise. Find the following:
(a) The number of outputs produced by the circuit.
(b) The truth table of the circuit.
(c) The minimal product-of-sums expression for each output.

Q2. Convert the AND/OR/NOT logic diagram shown below to a NAND logic diagram:
