King Fahd University of Petroleum and Minerals
ICS 571 – Client Server Programming – Fall 2016

Assignment #1

Objective: Learn basic html, web site development (using WebMatrix) and web hosting.

1. Use WebMatrix to develop a web site named "HW1_Site" (use Template Gallery → Empty Site from the HTML group). **Note:** In the dialog, change *Site Name* to **HW1_Site**.

2. Add a "**Default.html**" (Don't use *.cshtml*). The HTML should have the following:

   a. An HTML unordered list (<ul>) with hyperlinks to some resources on web programming. The list should be preceded by an appropriate heading (<h2>).

   b. Two images: one using a *relative URL* (e.g., "**images/myCar.png**"), and another using an *absolute URL* (e.g., a logo of some university or a computer company).

After developing your site in WebMatrix, upload your site files from WebMatrix to your hosted site. For this, you can either **1) *use the FileManger from Control Panel of your hosted domain*, OR 2) *In WebMatrix, you can setup a publishing profile (see the image below) and then click Publish button from the toolbar*.**

Important Note for Publish Settings: Site path is like **www.<your domain>/SiteFolder**

Note: Add a "web.config" file (sent via e-mail) to the root of your site.

Submission & Deadline:

Send an e-mail to instructor with the URL of your site by Thursday Sep. 29, 2016.
