

**Assignment #4 (worth 20 points)**

---

**Objective:** Learn and practice CSS for menus and tables. Also, develop web pages with Arabic content.

**Submission Deadline:** Host your page on <http://liveweave.com> (Don't make the link public). Then e-mail the link by March 14, 2015.

**You are to build a single Arabic page: it includes a 2-level horizontal menu and an HTML table.**

Your menu must use some known techniques for building a “fancy” horizontal menu (with submenus). The basic techniques are described in <http://designmodo.com/css3-dropdown-menu/>

A similar nice menu: <http://www.csstemplateheaven.com/demo/base2013/index.html>

Your menu **must be in Arabic (right-to-left)\*\*** with its *own theme* [background, font (size, style, color)] and must include a cool *hover* and *current* settings. For *current* setting, have one of the menu entries use a *class="current"* and provide some appropriate CSS rule for this class.

**\*\*Important Note: You are not allowed to copy HTML/CSS code of a whole menu from some other site. Any such solution will have no credit whatsoever.**

Also, do the following:

1. It is OK to remove the images from submenu (for easier hosting by *liveweave.com*). However, bonus points will be awarded for using some popular ICON font: <http://metroui.org.ua/icons.html> or <http://fortawesome.github.io/Font-Awesome/get-started/>
2. Add a small (flipped triangle) image to give a clue that a menu item has a submenu, as in: <http://www.csstemplateheaven.com/demo/base2013/index.html>
3. In the same page that has the menu, add **the first table** from <http://www.qatarfootball.com/showthread.php?t=65986> but style it with ideas from <http://cssmenuaker.com/blog/stylish-css-tables-tutorial>
4. **HTML and CSS Validation:** Use W3C **HTML5** and **CSS3** validators to ensure that your page is free of HTML or CSS errors. Use *Validate by direct input*.

For help on RTL (Namely, there is a “dir” HTML property and CSS “direction” property; also, you may use the CSS “text-align” property):

<http://www.w3.org/International/questions/qa-html-dir>
