Title: $\quad$ Calculus II
Credit: 4-0-4
Textbook: Calculus (Early Transcendentals), by J. Stewart, $6^{\text {th }}$ edition, Brooks/Cole, 2008
Description: Definite and indefinite integrals of functions of a single variable. Fundamental Theorem of Calculus. Techniques of integration. Application of the definite integral to area, volume, arc length and surface of revolution. Improper integrals. Sequences and series: convergence tests, integral, comparison, ratio and root tests. Alternating series. Absolute and conditional convergence. Power series. Taylor and Maclarin series.

## Grading Policy

1. Exam I: 25\% (100 points), Date: Sunday, March 28, 2010. A common multiple choice exam. Material: 5.1-6.3.
2. Exam II: $25 \%$ (100 points), Date: Sunday, May 02, 2010. A common written exam. Material: 6.5-11.1.
3. Class Work: $15 \%$ ( 60 points). It is based on quizzes (around 5 quizzes), homework, or other class activities determined by the instructor. Any quiz or test under class activity should be of written type and not of a multiple choice type.
4. Final Exam: 35\% (140 points), a comprehensive common multiple choice exam. It will be on Saturday, June 12, 2010 at 7:30 a.m.

Class Work Average. The average (x out of 60) of the Class Work of the sections taught by the same instructor should be in the interval [36, 45].

Exam Questions. The questions of the common exams are based on the examples, homework problems, recitation problems and the exercises of the textbook.

Missing an Exam. No makeup exam will be given under any circumstance. When a student misses Exam I or Exam II for a legitimate reason (such as medical emergencies), his grade for this exam will be determined based on the Department policy. Further, the student must provide an official excuse within one week of the missed exam.

Attendance. A DN grade will be awarded to any student who accumulates 12 unexcused absences (lecture and recitation).

Academic Integrity. All KFUPM policies regarding ethics apply to this course.

* CAS problems require the use of a technology tool (e.g., graphing calculators or a computer). You are encouraged to do these problems in order to enhance your understanding of the concepts involved.

## Tips on how to enhance your problem-solving abilities:

1. Please do all the homework assignments on time.
2. You are urged to practice (but not memorize) more problems than the above lists.
3. You should always try to solve a problem on your own before reading the solution or asking for help.
4. If you find it difficult to handle a certain type of problems, you should try more problems of that type.
5. You should try the recitation problems before coming to class.
6. You are encouraged to solve some of the review problems at the end of each chapter.
7. The practice you get doing homework and reviewing the class lectures and recitations will make exam problems easier to tackle.
8. Try to make good use of the office hours of your instructor.
