

**King Fahd University of Petroleum and Minerals,  
Department of Mathematics and Statistics- Term 171**

**Final Exam : Math 550, Linear Algebra**

**Duration: 4 Hours**

**NAME :**

**ID :**

**Exercise 1.** (5-5-5)

Let  $V$  be an  $n$ -vector space over a field  $F$  and  $T$  be a linear operator on  $V$ .

- (1) Assume that  $\text{Nullspace}(T)$  is isomorphic to  $\text{range}(T)$ . Prove that  $n = \dim V$  is even.
- (2) Find an example of a vector space  $V$  and  $T$  a linear operator on  $V$  such that  $\text{Nullspace}(T)$  is isomorphic to  $\text{range}(T)$ .
- (3) Assume that  $\text{range}(T) \cap \text{Nullspace}(T) = \{0\}$  and  $T^2 = 0$ . Prove that  $T = 0$ .

**Exercise 2.** (5-5-5-5 points)

Let  $A = \begin{pmatrix} 2 & 0 & 0 & 0 \\ 1 & 2 & 0 & 0 \\ 0 & 0 & 2 & 0 \\ 0 & 0 & a & 2 \end{pmatrix}$  where  $a$  is a real number.

- (1) Find the characteristic polynomial and the minimal polynomial of  $A$ .
- (2) For which values of  $a$  the matrix  $A$  is in the Jordan form?
- (3) Given two distinct values  $a_1 \neq a_2$  of  $a$  where  $A$  is in the Jordan form. Do the matrices  $A_1$  (for  $a = a_1$ ) and  $A_2$  (for  $a = a_2$ ) are similar? Justify.
- (4) Give an example of two matrices  $M$  and  $N$  with the same characteristic polynomials and same minimal polynomials that are not similar.

**Exercise 3.** (5-5-5)

Let  $V$  be an  $n$ -dimensional vector space over a field  $F$ ,  $T$  a linear operator on  $V$  and  $N$  a Nilpotent linear operator on  $V$ .

- (1) Assume that  $N^{n-1}\alpha \neq 0$  for some  $\alpha \in V$ . Prove that  $\alpha$  is a cyclic vector for  $N$ .
- (2) Assume that  $T^2$  has a cyclic vector. Prove that  $T$  has a cyclic vector.
- (3) If  $T$  has a cyclic vector, does  $T^2$  has a cyclic vector?

**Exercise 4.** (15 points)

Let  $V$  be an  $n$ -dimensional complex inner product space,  $T$  a linear operator of  $V$  and  $E$  an idempotent linear operator on  $V$ .

- (1) Prove that  $E$  is self-adjoint if and only if  $E$  is normal.
- (2) Prove that  $T$  is self adjoint if and only if  $(T\alpha|\alpha)$  is a real number for every  $\alpha \in V$ .

**Exercise 5.** (15 points)

Let  $B = \begin{pmatrix} \frac{\sqrt{2}}{2} & \frac{\sqrt{2}}{2} & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix}$ .

- (1) Apply Gram-Schmidt process to the rows of  $B$  to obtain an orthonormal ordered basis  $B' = \{\alpha_1, \alpha_2, \alpha_3\}$ .
- (2) Use (1) to find a unitary matrix  $U$  and a matrix  $M$  such that  $U = MB$ .

**Exercise 6.** (5-5-5)

Let  $V$  be a complex inner product space and  $T$  a linear operator on  $V$ .

Prove that the following assertions are equivalent.

- (1)  $T$  is normal;
- (2)  $\|T(\alpha)\| = \|T^*(\alpha)\|$  for every  $\alpha \in V$ .
- (3)  $T = T_1 + iT_2$  where  $T_1, T_2$  are self-adjoint operators on  $V$  and  $T_1T_2 = T_2T_1$ .

**Exercise 7.** (15 points)

Let  $V$  be an inner product space over a field  $F$ ,  $T$  a normal operator on  $V$ .

- (1) Prove that for every polynomial  $f(X) \in F[X]$ ,  $f(T)$  is a normal operator on  $V$ .
- (2) Let  $f(X)$  and  $g(X)$  be two polynomials in  $F[X]$  that are relatively prime and suppose that there is  $\alpha$  and  $\beta$  in  $V$  such that  $f(T)(\alpha) = g(T)(\beta) = 0$ . Prove that  $(\alpha|\beta) = 0$ .

**Exercise 8.** (5-5-5-5)

Let  $V = \mathbb{R}^3$ ,  $S = \{e_1, e_2, e_3\}$  its standard basis and  $f$  the skew symmetric bilinear form on  $V$  defined by  $f(X, Y) = x_1y_2 - x_1y_3 - x_2y_1 + 2x_2y_3 + x_3y_1 - 2x_3y_2$ .

- (1) Find  $[f]_S$ .
- (2) Find  $\text{rank}(f)$ .
- (3) Let  $W = \text{span}\{e_1, e_2\}$ . Find a basis  $B$  for  $W^\perp$ .
- (4) Find  $[f]_{B'}$  where  $B'$  is the basis  $B' = \{e_1, e_2\} \cup B$ .
