Question 1:   (12 points)

Show the stack with all activation record instances, including static and dynamic
chains, when execution reaches **position 1** in the following skeletal program:

```
procedure BIGSUB;
  integer v, w;
        procedure A;
         integer x, y;
                procedure B;
                  integer a, b , c;
                begin { B }
                …                ←---------------- (1)
                end; { B }
                procedure C;
                  integer x, w, a, c;
                begin { C }
                …
                B;
                …
                end: { C }
        begin { A }
        …
        C;
        …
        end: { A }
begin { BIGSUB }
…
A;
…
end; { BIGSUB }
```
