### 1.1 Definition and Terminology

Notations

| Notation | Meaning | Remark | Example |
| :---: | :---: | :---: | :---: |
| $y=f(x)$ | $y$ is a function of $x$ [Explicit Function] | i. $\quad x$ is Independent Variable <br> ii. $y$ is Dependent Variable | (1) $y=3 \sin x+5$ <br> (2) $y=2 \ln x+3 \sqrt{ } x$ |
| $f(x, y)=0$ | Functional Equation [ $y$ as Implicit Function of $x$ ] | In many cases, $y$ CAN NOT be an Explicit Function of $\boldsymbol{x}$ | (*) $y \cos x+y^{2} x=6$ |
| $\frac{d y}{d x} \text { or } y^{\prime}$ | Ordinary Derivative of $y$ with respect to $x$ | Rate of Change of $y$ with respect to $x$ | (1) $y^{\prime}=3 \cos x$ <br> (*) $y^{\prime}=\frac{y \sin x-y^{2}}{\cos x+2 y x}$ |
| $z=f(x, y)$ | $z$ is a function of $x, y$ | i. $x, y$ are Independent Variable ii. $z$ is Dependent Variable | (3) $z=3 \sin (x y)-x$ |
| $\frac{\partial z}{\partial y} \text { or } z_{y}$ | Partial Derivative of $z$ with respect to $y$ | Rate of Change of $z$ with respect to $y$ <br> Variable $x$ will be treated as Constant | (3) $\frac{\partial z}{\partial y}=3 x \cos (x y)$ |

Differential Equations
An Equation that Contains Derivatives or Partial Derivatives of One or More Dependent Variables with respect to One or More Independent Variables

## Classifications of Differential Equations

## I. Type of Differential Equations (ODE / PDE)

Ordinary Differential Equation (ODE) contains
Ordinary Derivatives of One or More
Dependent V ariables w.r.t. a Single Independent V ariable Examples

1. $3 \frac{d y}{d x}+2 y=e^{4 x}$
2. $\frac{d^{2} y}{d x^{2}}-x \frac{d y}{d x}+4 x^{2} y=0$

## II. Order of Differential Equations

 [Order of Highest Derivative in the Equation]Examples:

1. $3 \frac{d y}{d x}+2 y=e^{4 x} \quad$ (First Order ODE)
2. $\frac{d^{2} y}{d x^{2}}-x\left(\frac{d y}{d x}\right)^{4}+4 x^{2} y=0$ (2nd Order ODE)
3. $f\left(x, y, y^{\prime}, y^{\prime \prime}, \ldots . ., y^{(n)}\right)=0$ (nth Order ODE)

Partial Differential Equation (PDE) contains
Partial Derivatives of One or M ore
Dependent Variables w.r.t. Two or M ore Independent V ariable Examples

1. $\frac{\partial u}{\partial y}+\frac{\partial v}{\partial x}=0$
2. $\frac{\partial^{2} u}{\partial x^{2}}=\frac{\partial^{2} v}{\partial t^{2}}-2 \frac{\partial u}{\partial t}$

## III. Linear ODE

$$
y^{(n)}=f\left(x, y, y^{\prime}, \ldots ., y^{(n-1)}\right)
$$

is Linear ODE if $f$ is a Linear Function of $y, y \ldots \ldots . y^{(n-1)}$

|  | ODE | Order | Linear |
| :--- | :---: | :---: | :---: |
| 1. | $2 y^{\prime}+3 x y=y \sin x$ | 1 | Yes |
| 2. | $2 y^{\prime}+3 x y=\sin y$ | 1 | No |
| 3. | $y^{\prime \prime \prime}+3 x y y^{\prime}=\sin x$ | 3 | No |
| 4. | $y^{\prime}+3 x\left(y^{\prime \prime}\right)^{3}=\sin x$ | 2 | No |
| 5. | $y^{\prime}+3 \sin x y^{\prime \prime}=\cos x$ | 2 | Yes |

Solution of a Differential Equations $f\left(x, y, y^{\prime}, y^{\prime \prime}, \ldots y^{(\mathrm{n})}\right)=0$
$y=\square(x)$ defined on an Interval $\mathbf{I}$ is a Solution if

$$
f\left(x, \square, \square^{\prime}, \square^{\prime \prime}, \ldots \square^{(\mathrm{n})}\right)=0
$$

Exercises 1.1

| Q. | Equation | Type | Order | Linear / <br> Nonlinear | Solution <br> (Verify!) |
| :---: | :---: | :--- | :--- | :--- | :--- |
| 15 | $y^{\prime}=25+y^{2}$ |  |  |  | $y=5 \tan x$ |
| 19 | $x^{2} d y+2 x y d x=0$ |  |  |  | $y=-1 /\left(x^{2}\right)$ |
| 21 | $y=2 x y^{\prime}+y\left(y^{\prime}\right)^{2}$ |  |  |  | $y^{2}=\mathrm{c}_{1}\left(x+1 / 4 \mathrm{c}_{1}\right)$ |
| 34 | $y^{\prime \prime}+y=\tan x$ |  |  |  | $y=-\cos x \ln (\sec x+\tan x)$ |
| 41 | $\left(y^{\prime}\right)^{2}=\mathbf{9} x y$ |  |  |  | $y= \begin{cases}0, & x<0 \\ x^{3} & x \geq 0\end{cases}$ |
| 42 |  |  |  |  | $y=e^{\text {mx }}$ for some m |
| 43 | $y^{\prime \prime}-\mathbf{5} y^{\prime}+6 y=0$ |  |  |  | $y=x^{\mathrm{m}}$ for some m |

Type of Solutions of ODE

|  | Type | Explanation | Examples |
| :---: | :---: | :---: | :---: |
| 1 | Explicit Solution | Dependent Variable is Expressed Only in terms of Independent Variable, i.e. $\mathbf{y}=\square(x), x \in \mathrm{I}$ | Q. 15, 19, 34, 41, 42, 43 have Explicit Solutions on Intervals with some Condition (Can you find it?) |
| 2 | Trivial Solution | Solution: $\mathrm{y}=\mathbf{0}$ on some interval I [N ote: N ot Every ODE has a Trivial Sol.] | i. Q. 21, 41-43: Trivial Solution on R. ii. Q. 19 : Trivial Solution on any interval not containing 0. <br> iii.Q. 15, 34 : No Trivial Solution. |
| 3 | Implicit Solution | A Solution of the Form : $\mathbf{G}(\mathrm{x}, \mathrm{y})=\mathbf{0}$ on an Interval I where at least One Function <br> a) $\mathrm{y}=\square$ <br> $(x)$ satisfies the ODE <br> b) $\mathrm{y}=$ <br> $(x)$ is an implicit function of $\mathbf{x}$. | i. Q. 21: The solution is Implicit. |

1. i. Integral of ODE: Solution of ODE
ii. Integral Curve: Graph of Solution
2. One-Parameter Family of Solutions: A Solution $\mathbf{G}(x, y, c)=\mathbf{0}$ of $\mathbf{1}^{\text {st }}$ Order ODE $\mathbf{F}\left(x, y, y^{\prime}\right)=\mathbf{0}$
[Note: The solution contains $\mathbf{O n e}$ Parameter c , the constant due to one Integration]
3. $\mathbf{n}$ - Parameter Family of Solutions: $\mathbf{G}\left(x, y, c_{1}, \ldots c_{\mathrm{n}}\right)=\mathbf{0}$ for $\mathrm{n}^{\text {th }} \operatorname{Order} \operatorname{ODE} \mathbf{F}\left(x, y, y^{\prime}, \ldots, y^{(\mathrm{n})}\right)=\mathbf{0}$
4. Particular Solution: A Solution of ODE that is free of Arbitrary Parameter.[See Solutions: $\mathrm{Q} 15,19$ ]
5. Piecewise-Defined Solution: A Particular Solution of ODE in the Form of Piecewise-Defined Function which can not be obtained from the Parametric Family of Solutions. [See Solution: Q 41]
6. Singular Solution: A Solution of ODE that cannot be obtained from the Parametric Family of

Solutions simply by the replacement of the Parameter(s) with constant(s).
Example: i. $y=\left(x^{2} / 4+c\right)^{2}$ is a one-parameter family of Solutions for the ODE $y^{\prime}=x \sqrt{ }$ y.
ii. $y=0$ is also a solution of the same ODE. But it can not be obtained from $y=\left(x^{2} / 4+c\right)^{2}$
