

- 2.3 Functions -

23 p1

Objectives

Relations, Functions

Domain, Range.

Vertical line test.

Function Notation.

Increasing & Decreasing function.

A relation is a set of ordered pairs

It can be given by a list or by an equation relating the two variables.

Expt.

$$E = \{(-1, 2), (1, 0), (-1, 3), (0, 2), (2, 3)\}$$

is a relation (given by a list)

$$F = \{(x, y) / x^2 + y = 1\} \text{ is also a relation}$$

It is given by an equation.

A Function is a relation in which no two ordered pairs have same first component & different second coordinates.

Expt 2.

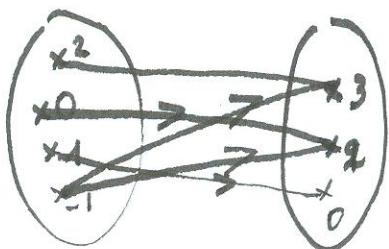

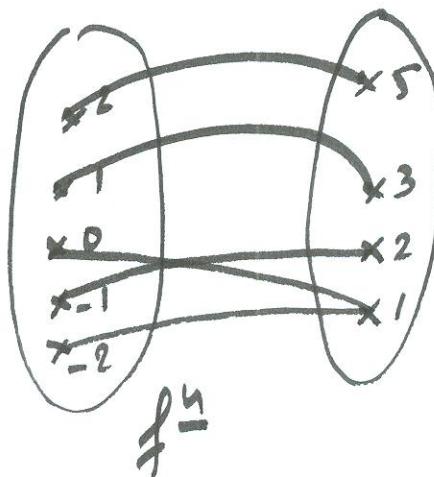

$$E = \{(-1, 2), (1, 0), (-1, 3), (0, 2), (2, 3)\}$$

is a relation but not a f^n (because \notin
 $(-1, 2), (-1, 3)$)

$$G = \{(-2, 1), (-1, 2), (0, 1), (1, 3), (2, 5)\}$$

is a function.

Relations & Diagrams

not f^n  f^n

How can we show a relation defined by an eqⁿ
is a f^n

1. Solve eqⁿ for y (the second variable)

2. If there is one solⁿ y , it is a function
 If there are more solⁿs, it is not a function.

Ex 3. Check for every eqⁿ if it defines
a function or not.

(2.3 p3)

a) $x + 1 + y = 0$ b) $x^2 + y^2 = 1$
c) $|y - 2| = x$ c) $y^3 = x^2 + 3$

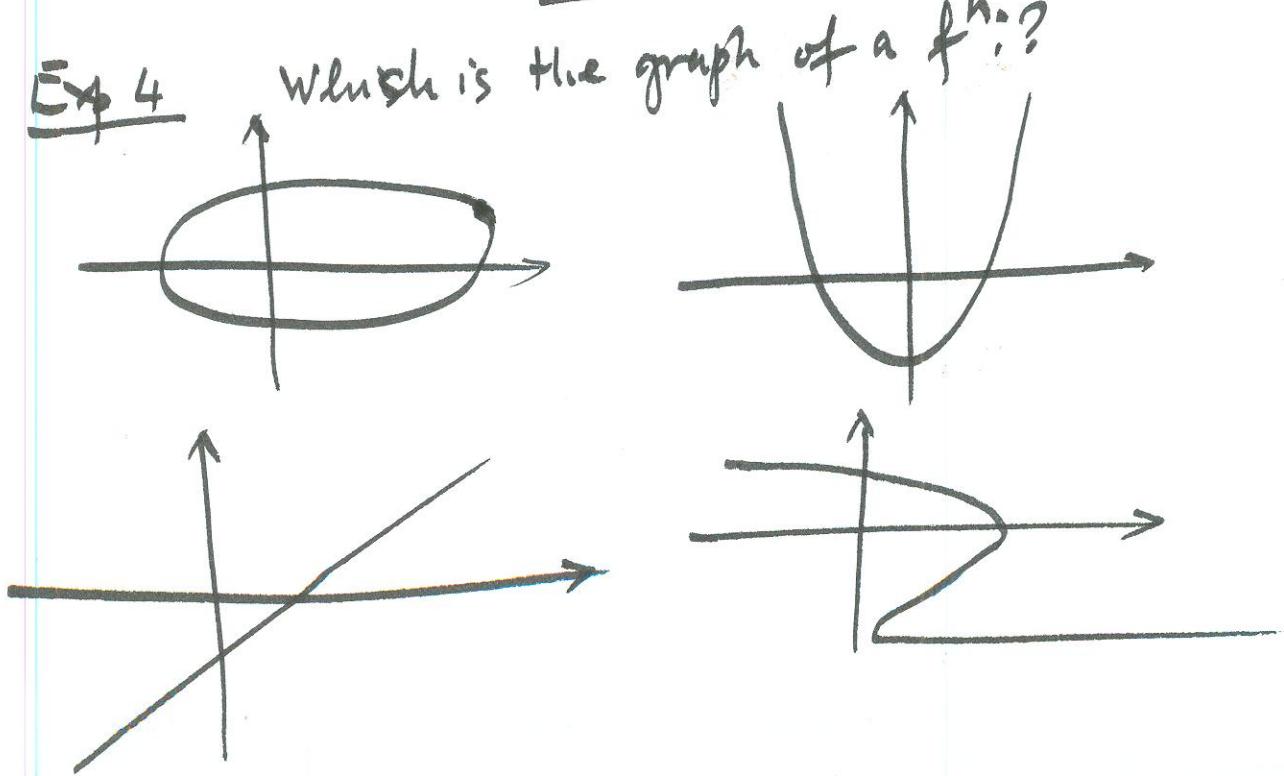

a) $y = -x - 1 \rightarrow f^n$
b) $y = \pm\sqrt{1-x^2}$ not f^n

Use of the graph to check if a relation defines
a f^n .

Vertical line test

A relation is a function if its graph
cuts an vertical line at one point at most.

Ex 4 Which is the graph of a f^n ?

Domain & Range

The domain of a relation (or function) is the set of the first coordinates in all the pairs of the relation.

The range of a relation is the set of the second coordinates of all pairs of the relation.

Ex 5. $E = \{(-2, 1), (-1, 1), (0, 2), (1, 3)\}$

Domain : $\{-2, -1, 0, 1\}$

Range : $\{1, 2, 3\}$

For equations, the domain of a function is the set of numbers x for which y is defined.
