Abstract

Tetraphenylborate salts of Na, Mg, Ca, Sr, and Ba complexes of polyethylene glycol, polypropylene glycol, and polyoxyethylene nonylphenyl ether were prepd. and characterized by anal. and IR and NMR spectroscopy. An alkylene oxide-cation ratio of 8.5:1 occurs in the Na complexes and 12:1 (.apprx.10.5:1 for the polyethylene glycals) in the alk. earth metal complexes.
