COE 202: Digital Logic Design (3-0-3)
Term 172 (Spring 2018)
Major Exam 1
Saturday Feb. 24, 2018

Time: 90 minutes, Total Pages: 9

Name: $\qquad$ ID: $\qquad$ Section: $\qquad$

## Notes:

- Do not open the exam book until instructed
- No Calculators are allowed (basic, advanced, cell phones, etc.)
- Answer all questions
- All steps must be shown
- Any assumptions made must be clearly stated

| Question | Maximum Points | Your Points |
| :---: | :---: | :---: |
| 1 | 19 |  |
| 2 | 15 |  |
| 3 | 16 |  |
| Total | 50 |  |

## Question 1.

a) The minimum number of bits required to store 20 different colors in binary is equal to
$\qquad$ bits. If the number of colors is multiplied by 4 (i.e. 80 colors), then the minimum number of required bits will be equal to $\qquad$ bits.
( 2 points)
b) Counting the number of seconds in one minute in BCD requires (how many) $\qquad$ bits.
c) The smallest non-zero 3-bit fraction in binary is $\qquad$ and its decimal value is equal to $\qquad$ .
d) The 8 -bit binary code for character " $C$ " is $\mathbf{0 1 0 0 0 0 1 1}$. Using even parity, the sender inserts an extra parity bit equal to $\qquad$ The receiver receives a 9 -bit binary code equal to 001000011, would the receiver detect an error ( $\mathrm{Yes} / \mathrm{No}$ )? $\qquad$
e) Convert between different number systems. Fill-in the table below with different representations of a number.

| Decimal | Binary | Hexadecimal |
| :---: | :---: | :---: |
| 102.25 |  |  |
|  |  | 2B.C |

f) Convert between BCD 8421 and Excess- 3 codes:
(2 Points)

| BCD 8421 | Excess-3 BCD |
| :---: | :---: |
| 10010101 |  |
|  | 10100111 |

g) Given the following 8-bit binary numbers:
$A=(00110110)_{2}$
$B=(11101101)_{2}$
i) Compute $\mathbf{A}+\mathbf{B}$ in binary and indicate whether there is a final carry.
ii) Compute $\mathbf{A}-\mathbf{B}$ in binary and indicate whether there is a final borrow.

## Question 2.

a) Express the Boolean function, F, represented by the circuit given below in sum of products form:
(3 Points)

b) Find the complement of the function $F 1=(A \bar{B}+C) \bar{D}+E$
(2 Points)
c) Using Boolean Algebraic manipulations, minimize the following functions to minimum number of literals in sum of products representation:
(i) $F 2=A+\bar{A} C+(A+C)(\bar{A}+\bar{C})$
(3 Points)
(ii) $F 3=A B+\bar{A} C+\bar{B} C+A \bar{C}$
(iii) $F 4=(A+B)(A+C)(\bar{A}+\bar{B})(A+\bar{C})$
(3 Points)

## Question 3.

a) For the following subparts ( $\mathrm{i}-\mathrm{iv}$ ), assume that $F(A, B, C)=\sum(1,2,5,7)$
(i) Complete the truth table of the function $F$.

| $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{C}$ | $\mathbf{F}$ |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 0 |  |
| 0 | 0 | 1 |  |
| 0 | 1 | 0 |  |
| 0 | 1 | 1 |  |
| 1 | 0 | 0 |  |
| 1 | 0 | 1 |  |
| 1 | 1 | 0 |  |
| 1 | 1 | 1 |  |

(ii) List all the maxterms of $F$ using the $\Pi$ notation.
(iii) List all the minterms of $\bar{F}$ using the $\sum$ notation.
b) Let the function $G(A, B, C)=1$ whenever $A=\bar{B}$, regardless of the value of $C$. List the minterms of $G$ using the $\sum$ notation.
c) Let $H(A, B, C)=\left(\sum(1,3,5,7)\right)(\Pi(2,4,6,7))$. List the minterms of $H$ using the $\sum$ notation.
(2 Points)
d) Let $K(A, B, C)=A B+\bar{C}$. List the minterms of $K$ using the $\sum$ notation.
(2 Points)
e) Consider the following circuit:

The following table summarizes the propagation delay of the gates:

| Gate | Delay |
| :--- | :---: |
| 2-input AND gate | 2 ns |
| 3-input AND gate | 3 ns |
| 2-input OR gate | 2 ns |

Calculate the propagation delay for each of the following gates: X1, X2, X3, and G. The delay must be calculated from the primary inputs to the output of the gate. Please fill in the second column of the following table for answering this part.

| Gate | Propagation delay (ns) |
| :---: | :--- |
| X1 |  |
| X2 |  |
| X3 |  |
| G |  |
