# King Fahd Univesity of Petroleum \& Minerals Department of Electrical Engineering 

## EE200-03

## Homework \# 3

1. Reduce the following Boolean function to the minimum number of literals:
$F(x, y, z)=x^{\prime} y z^{\prime}+x^{\prime} y z+x y^{\prime} z^{\prime}+x y z^{\prime}+x y z$
2. Simplify the following Boolean function by algebraic manipulation:
$F(A, B, C)=A^{\prime} B^{\prime} C^{\prime}+\left(A+B C^{\prime}\right)^{\prime}+C$
3. Represent the following Boolean function in a truth table: $F(w, x, y, z)=w y^{\prime}+x y\left(w^{\prime}+z\right)^{\prime}$
4. Express the function given in (1) above as a sum of minterms and product of maxterms.
5. Simplify the following Boolean function using Karnaugh map.
$F(a, b, c, d)=\sum(0,1,3,4,5,8,9,11,14,15)$
