

Physics 102-Rec
Quiz # 8 - Sect.24
Chapter 27

Instructor: Dr. A. Mekki

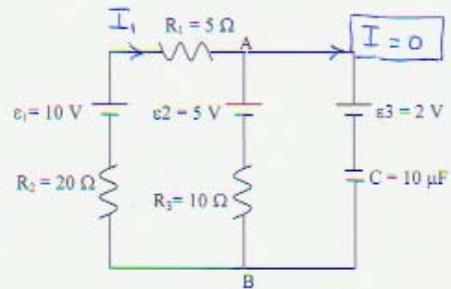

Name: Key

Id: _____

Consider the circuit shown in the figure.

- (a) After a very long time (the capacitor is fully charged), calculate the potential difference $V_A - V_B$.

When the capacitor is fully charged, there is No current in that branch.

$$10 - 5I_1 - 5 - 10I_1 - 20I_3 = 0$$

$$I_1 = \frac{5}{35} = 0.14 \text{ A}$$

$$V_A - V_B = 10I_1 + E_2 = 1.4 + 5 = 6.4 \text{ V}$$

- (b) What is the potential difference across the capacitor in the same situation as part (a)?

$$V_C + E_2 = 6.4 \text{ V}$$

$$\Rightarrow V_C = 4.4 \text{ V}$$
