## Ayman Ghannam

## Chapter 2 "Motion Along a Straight Line"

1- The figure represents the straight-line motion of a car.
What is the distance traveled by the car from $t=0$ to $t=5 h$ ? (A: 480 km )

2- A particle moves along the x -axis according to the equation: $\mathbf{x}=\mathbf{5 0 *} \mathbf{t}+\mathbf{1 0} \mathbf{0}^{* * *} \mathbf{2}$
where $x$ is in $m$ and $t$ is in $s$. Calculate the instantaneous velocity of the particle at $t=3 \mathrm{~s} .(\mathrm{A}: 110 \mathrm{~m} / \mathrm{s})$
3- A balloon carrying a package is ascending (going vertically upward) at the rate of $12 \mathrm{~m} / \mathrm{s}$. When it is 80 m above the ground the package is released. How long does the package take to reach the ground? (A: 5.4 s )

4- The position of a particle moving along the $x$ axis is described by the equation

$$
\mathrm{x}(\mathrm{t})=5.0+2.0 \mathrm{t}+\mathrm{t}^{* * 3}
$$

Find its average acceleration for the time interval $t=1.0 \mathrm{~s}$ to $\mathrm{t}=2.0 \mathrm{~s} .\left(\mathrm{A}: 9.0 \mathrm{~m} / \mathrm{s}^{* *} 2\right)$

5-A racing car traveling with constant acceleration increases its speed from $10 \mathrm{~m} / \mathrm{s}$ to $30 \mathrm{~m} / \mathrm{s}$ over a distance of 80 m ? How long does this take? (A: 4.0 s )

6- An object is thrown vertically upward at $35 \mathrm{~m} / \mathrm{s}$. Taking $g=10 \mathrm{~m} / \mathrm{s}^{2}$, the velocity of the object after 5 seconds later is: (A: $15 \mathrm{~m} / \mathrm{s}$ downward)

7- A stone is thrown vertically upward with an initial speed of $19.5 \mathrm{~m} / \mathrm{s}$. It will rise to a maximum height of: (A:19.4 m)

8- A stone is released from rest from the edge of a building 190 m above the ground. Neglecting air resistance, the speed of the stone, just before striking the ground, is: (A: $61 \mathrm{~m} / \mathrm{s}$ )

9- A projectile is shot vertically upward with a given initial velocity. It reaches a maximum height of 100 m . If, on a second shot, the initial velocity is doubled then the projectile will reach a maximum height of: ( $\mathrm{A}: 400 \mathrm{~m}$ )

10- An object is released from rest at a height $H$. It takes 2.00 s for the object to fall from point $A$ to point B (see the Figure). What is the initial height H? (A: 385 m )
