

## Force-Vector Diagrams

In each case, a rock is acted on by one or more forces. Draw an accurate vector diagram showing all forces acting on the rock, and no other forces. Use a ruler, and do it in pencil so you can correct mistakes. The first two are done as examples. Show by the parallelogram rule in 2 that the vector sum of  $A + B$  is equal and opposite to  $W$  (that is,  $A + B = -W$ ). Do the same for 3 and 4. Draw and label vectors for the weight and normal forces in 5 to 10, and for the appropriate forces in 11 and 12.

<p>1. Static</p> 	<p>2. Static</p> 	<p>3. Static</p> 
<p>4. Static</p> 	<p>5. Static</p> 	<p>6. Sliding at constant speed without friction</p> 
<p>7. Decelerating due to friction</p> 	<p>8. Static (Friction prevents sliding)</p> 	<p>9. Rock slides (No friction)</p> 
<p>10. Static</p> 	<p>11. Rock in free fall</p> 	<p>12. Falling at terminal velocity</p>
